Recommendation letter for

**GLASSCON**

Premium Architectural Building Skins

[www.glasscon.com](http://www.glasscon.com)

To whom it may concern,

In January 2021, we, the General Contractor TERNA SA awarded the façade expert GLASSCON for the project “FIVE-STORY OFFICE BUILDING COMPLEX ON FRAGKOKKLISIAS STREET NO. 6, ATHENS/GREECE” and specifically for the design, testing, procurement, installation & take off of a high-end architectural building envelope with motorized solar shading louvers. The custom solar louver system was made with special perforated aluminum sheets according to architects’ requirements, in order to provide the best daylight guidance & solar shading in the building. Additionally, GLASSCON applied and passed successfully the testing procedure for custom solar shading systems in ift ROSENHEIM according to EN 13659:2008, while acquiring a CE Certificate.

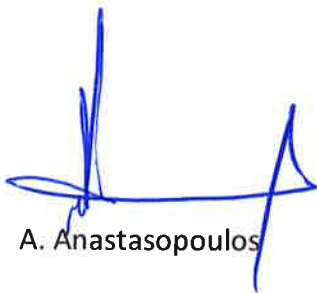

From the very beginning of the design work with the shop drawings and calculations and up to the final CE testing procedure, GLASSCON and its experts illustrated their attention to detail, high quality services, reliability & commitment to the project, while always responding pleasant and prompt to any requirements.

You may consider GLASSCON as a great reliable partner for high end façade engineering & contracting. I look forward to working with them again soon.
